General information

Peru's population by age:
- 15-64: 64%
- 0-4: 30%
- 65 and more: 6%

Peru's population by region:
- 66% Lima
- 34% Other departments

Department of Lima:
Employment and unemployment rates:
- Labor force unemployed: 9%
- Labor force employed: 91%
- Adequate employment: 45.1%
- Under employment: 46.1%

◊ Future developments

The last decade has been one of continuous **GDP** growth (5,1% avg.) and constant **prices** in Peru (2,6% avg.)...

...in which the **GDP per capita** more than doubled, from US$ 2035 to US$ 4533...
...and the financial system wasn’t foreign to this economic growth, increasing its stock of *loans and deposits* in near 200%...

However, these results haven’t achieved deeper penetration of financial services’ use, compared with other Latam countries.

Financial Inclusion: What is it?

Inclusion of Financial Literacy contents in the high-school curriculum

After several meetings between the SBS and the Ministry of Education, the 2009 school curriculum (DCN, by its initials in Spanish) was approved last December. This document determines the skills and knowledge that the students of primary and high school should acquire during their education.
Financial Inclusion: Why is important to measure it?

It is important to produce, estimate and analyze financial inclusion indicators which address the need to know how deep or shallow is current access and use of financial products and services by the population. These indicators should be measurable and meaningful for developing countries, in which there is urgent need to understand their financial inclusion levels and to take proactive and effective action.

Indicators of Financial Inclusion: Quantitative Indicators

I) Access
- Number of branches per 10 000 pop.
- Number of ATMs per 10 000 pop.
- Number of agents per 10 000 pop.

II) Use
- Number of depositors per 1000 pop.
- Number of borrowers per 1000 pop.
- Average size of total deposits per depositor to GDP per capita
- Average size of total loans per borrower to GDP per capita
- Population not covered by financial services
Indicators of Financial Inclusion: Quantitative Indicators

III) Geographical Inequality Distribution
- Total loans in provinces to total deposits in provinces
- Borrowers by region
- Number and geographic distribution of branches and agents, major banks
- Distribution of agents and socioeconomic needs

IV) Other:
- Financial services through non regulated Micro Finance Institutions
Quantitative Indicators: Number of branches per 10,000 pop.

There are 1.4 bank branches per 10,000 people in Peru, which is near to the average of Latin America (1.3).

BM: Multiple-operation banks
OM: Regulated multiple-operation institutions.
Source: Financial access 2009, SBS.
Financial services are also offered by ATMs and banking agents, so its development is important in the promotion of financial inclusion.

There are 2.5 ATMs per 10 000 people, which is near to the average in developing countries (2.3) but represents a low level compared with developed countries (7.8).

Source: Financial access 2009, SBS.
Indicators of Financial Inclusion: Quantitative Indicators

I) Access
- Number of branches per 10 000 pop.
- Number of ATMs per 10 000 pop.
- Number of agents per 10 000 pop.

II) Use
- Number of depositors per 1000 pop.
- Number of borrowers per 1000 pop.
- Average size of total deposits per depositor to GDP per capita
- Average size of total loans per borrower to GDP per capita
- Population not covered by financial services

III) Geographical Inequality Distribution
- Total loans in provinces to total deposits in provinces
- Borrowers by region
- Number and geographic distribution of branches and agents, major banks
- Distribution of agents and socioeconomic needs

IV) Other:
- Financial services through non regulated Micro Finance Institutions
Quantitative Indicators: Number of Depositors per 1 000 pop.

There are 564 depositors per 1000 people in Peru, which represents a low level compared with Chile (1932), Colombia (1151), and the Latam average (746)*.

Source: Financial access 2009, SBS.
*A person may have more than one deposit account.
Quantitative Indicators: 
Number of Borrowers per 1000 pop.

The countries with the higher rate of Borrowers per people in Latam region are: Chile (808) and Venezuela (484), while Peru has 366 Borrowers per 1000 people.

Source: Financial access 2009, SBS
*A person may have more than one credit.
Quantitative Indicators: Deposits per Deppositor and Loans per Borrower as a percentage of GDP per capita

The average size of credits and deposits has decreased as a consequence of the growth in the number of borrowers and depositors in the financial system. It is means that the use of financial services has increased.
## Population not covered by financial services

Each socioeconomic status shows a significant proportion of people not using basic personal financial services, like deposit accounts or credit cards.

Population not covered by insurance and pension funds

There is a considerable part of the population covered by some insurance product, but pension benefits for retired people are still a privilege of workers with adequate employment.

- Total loans in provinces to total deposits in provinces
- Borrowers by Region
- Number and geographic distribution of branches and agents, major banks
- Distribution of agents and socioeconomic needs

IV) Other:
- Financial services through non regulated Micro Finance Institutions.
Microfinance institutions have increased their network reach. In later years the MFIs, which were originally established in provinces, opened branches in Lima.

As a result of that the credits/deposits rate in provinces has grown 30%, in comparison with 2001, which means that deposits from Lima have funded the credit lines for provinces.
Quantitative Indicators: Borrowers by Region

The number of borrowers in provinces increased by 23% in the last two years (*).

Source: SBS.

* There is no available information for number of Depositors per location.
Quantitative Indicators: Distribution of agents and socioeconomic needs (Ignacio Mas index)

- 86% of Peruvian districts don’t have a bank branch nor a banking agent.
- 7% of the districts, accounting for 16% of the population, have banking presence exclusively through banking agents.

Quantitative Indicators: Number and geographic distribution of branches and agents, major banks

- Agent networks are concentrated in Lima and other major cities.
- In rural areas there is only 13% of bank branches and 16% of bank agents.

- Number of agents per 10 000 pop.

II) Use
- Number of depositors per 1000 pop.
- Number of borrowers per 1000 pop.
- Average size of total deposits per depositor to GDP per capita
- Average size of total loans per borrower to GDP per capita

III) Geographical Inequality Distribution
- Total loans in provinces to total deposits in provinces
- Borrowers by Region
- Number and geographic distribution of branches and agents, major banks
- Distribution of agents and socioeconomic needs

IV) Other:
- Financial services through non regulated Micro Finance Institutions.
Quantitative Indicators: Financial services through non regulated Micro Finance Institutions

There are Micro Finance Institutions (MFIs) that are not under the regulated system, as is the case with NGOs dedicated to provide financial services to people in need, and also the case of savings and credit cooperatives.

Both of them offer financial services mostly to people that have little or no access to regulated finance institutions.

Indicators of Financial Inclusion: Qualitative Indicators

I) Perception of the Financial System in urban areas

- Survey in Lima Metropolitana
- Size of the sample: 400 households
- Priority topics: saving accounts open; credit card use and familiar budget building.
- Principal outlines:
  - Only 3 of each 10 have a saving account
  - Only 6 of each 10 ask a credit in the financial system
  - 8 of each 10 say they know how to make a family budget, but only 5 say to use a family budget
  - 4 of each 10 say they don’t use a family budget because it is not an habit or because it is not important
Perception of the Financial System in Urban areas

As an example: Family budget perception

![Family budget chart]

![If you know how to make a budget, why do not you make one? chart]
Indicators of Financial Inclusion: Qualitative Indicators

I) Perception of the Financial System in rural areas

- Interviews in Pucallpa (Selva Region)
- There is only one banking branch in this region
- Priority topics: basic knowledge of the financial system (financial literacy), basic knowledge of the financial products and services; and use of e-banking.

Principal outlines:
- 100% recognize the name of the Superintendency, but none identifies the its role
- None knows the products and services offered by the bank, they only go to a specific use (to cash his paycheck or receive a wire transfer)
- None knows how to make a complaint
- None uses the e-banking
Financial Services in rural areas

- Financial institutions located in rural areas are: Banco de la Nación (state bank), non bank financial institutions, NGOs, as well as savings and credit cooperatives.

- Banco de la Nación has 304 UOB (sole banking offer) branches nationwide.

- Video
Qualitative Indicators: Perception of the Financial System in Rural areas

Base: 17 users of the state-owned bank in towns with just one bank branch

Future developments

- Development of new indicators:
  - Gini indexes of deposits, loans and branches related to population.
  - Qualitative and quantitative indicators from a baseline survey on financial literacy and financial access and use of financial products and services.

- Implementation of policies for increasing financial inclusion:
  - Urban: Financial education actions focused on low-end socioeconomic status.
  - Rural: Creation of optimal access conditions through regulation aimed to new rural users.
