ACKNOWLEDGMENTS

This Guideline Note is a product of the Consumer Empowerment and Market Conduct Working Group (CEMCWG).

Contributors:
The following AFI member institutions and CEMCWG members provided qualitative insights through in-depth interviews: Madalitso Chamba (Reserve Bank of Malawi), Rochelle Tomas (Bangko Sentral ng Pilipinas), Hazell Raquel Del Cid Marroquin (Central Bank of El Salvador), George Wilson Soonko (Bank of Uganda), Moses Musantu and Madalitso Mwanza (Bank of Zambia), Hery Njaka and Solofo Rakotomavoe (Ministry of Finance, Madagascar), Ligia Marcela Herrera (National Commission of Banks and Insurance, Honduras), Wati Seeto (Reserve Bank of Fiji), Freda Diau (Central Bank of Solomon Islands), Dr. Waleed Qasrawie, Ola Khaki, Dinas Madfas (Central Bank of Jordan), Francoise Kagoyire (National Bank of Rwanda), Erik Camelos (Superintendencia de Bancos Ecuador) and Vanessa D’Costa-Chehin (Centrale Bank van Suriname).

From the AFI Management Unit, led by Sulita Levaux (Policy Specialist, CEMC) with support from Eliki Boletawa (Head of Policy Programs and Regional Initiatives), Helen Walbey (Head Gender Inclusive Finance), Mariam Jemila Zahari (Policy Specialist) and Danielle Hopkins (IF Consulting).

We would like to thank AFI member institutions, partners, industry experts (CFI, UNCDF, Tufts University) and donors for generously contributing to the development of this publication.
1. INTRODUCTION

1.1. BACKGROUND

In a recent survey conducted with AFI members in 2020, financial education was ranked as the top priority with 75 percent of members identifying it as the number one policy area, followed by consumer protection at 74 percent and digital financial literacy at 70 percent. The value and impact of financial education contributing to financial inclusion is limited if people cannot access relevant and affordable financial services. At the same time, financial education can reduce the demand-side barriers to financial inclusion as people better understand their formal financial options and make informed choices to access and use these financial services.

AFI’s Kigali Statement highlights the need to promote and implement financial education and consumer protection policies, regulations and programs through cross-agency collaborations resulting in effective financial capabilities and redress mechanisms suitable to disadvantaged groups such as women, youth, older persons, forcibly displaced persons, the economically disadvantaged, racial and ethnic minorities and persons with disabilities (AFI 2019). To uphold this call to action as well as the network’s commitment to the 2030 Agenda for Sustainable Development Goals and Denarau Action Plan to close the financial inclusion gender gap in access to formal financial services, many AFI members seek guidance on how to reach these vulnerable groups with financial education.

1.2. OBJECTIVE AND SCOPE

The objective of this Guideline Note is to provide practical guidance built around AFI CEMCWG members’ experiences for financial policymakers and regulators on implementing a national financial education strategy aiming to effectively reach the most vulnerable market segments such as women, youth and the forcibly displaced.

This Guideline Note builds on AFI’s 2021 National Financial Education Strategy (NFES) Toolkit to offer key policy considerations and share country examples and best practices in reaching these target groups during each of the three phases of the NFES lifecycle: pre-formulation, formulation, and implementation, with monitoring and evaluation as a cross-cutting theme.

1 AFI Member Needs Assessment (MNA) (2020).
2 www.afi-global.org/global-voice/maya-declaration/kigali-accords/
3 AFI NFES Toolkit (2021): AFI has identified these definitions from direct consultation with members of the CEMCWG and based on alignment with existing definitions proposed by the OECD and World Bank. These definitions are provided to guide the reader and can be adapted, combined or extended based on the country and institution’s practices and priorities.

1.3. DEFINITIONS

AFI defines financial literacy as the “awareness and knowledge of financial concepts and products needed to manage personal finances, per one’s economic and social circumstances” (AFI 2021).

AFI defines financial education as “a process of providing people with the knowledge, skills, attitudes and exposure through access to relevant objective information, and training to enable them to make informed financial decisions and take actions appropriate to their circumstances” (AFI 2021).

AFI defines financial capability as “an individual’s confidence and competencies in financial knowledge, skills and behaviors needed to undertake informed and relevant decisions and actions about personal and household finances to improve one’s financial well-being” (AFI 2021).
2. POLICY CONSIDERATIONS: NFES FOCUSING ON VULNERABLE GROUPS

2.1. TARGET GROUPS IN AN NFES

Financial literacy levels are much lower among vulnerable groups such as women, youth, and the forcibly displaced. Vulnerable groups— which may include persons with disabilities, older persons, rural population and other groups— are not limited to those presented in this Guideline Note and should be evaluated on a country-by-country basis or context and be guided by adapted policy considerations. These vulnerable groups face some of the following barriers that directly affect their ability to integrate into the formal financial system, including but not limited to:

To address these barriers, the policy considerations highlighted in Figure 1 should be considered for each vulnerable market segment. The Annexes below can be consulted to complete the analysis for each section:
FIGURE 1: BARRIERS FACED BY VULNERABLE GROUPS

**DEMAND SIDE CONSTRAINTS**

- Lower (digital) financial literacy and capability levels
- Lack of self-efficacy or trust in the formal financial system
- Lack of assets for collateral
- Geographic distance from a financial institution
- Employment in the service sector, informal sector or self-employed
- Lack of formal identification
- Limited ownership of mobile phones and SIM cards

**SUPPLY SIDE CONSTRAINTS**

- Lack of disaggregated data for specific groups
- Perceived high risk by financial institutions due to a lack of assets, credit history, “flight” or “reputational risk”
- Financial institutions speak a complicated language
- Service delivery not adapted to most vulnerable groups
- Lack of transparency in pricing and unfair market practices

**REGULATORY AND INFRASTRUCTURE BARRIERS**

- Digital financial services and distribution channels
- Know Your Customer (KYC) regimes
- Acceptance of discriminatory laws
- Collateral requirements and collateral registries
- Absence of credit bureaus

**SOCIETAL BARRIERS**

- Discriminatory social norms and policies that lead to stigma
- Cultural and religious considerations
- Language barriers

---

6 Less ownership of land and assets for collateral, e.g. discriminatory inheritance laws favoring men over women.
7 Most impacted by the COVID-19 global crisis.
8 “Flight risk” e.g. fear of future migration, “reputational risk” e.g. prejudices, misconceptions.
INTEGRATING VULNERABLE GROUPS IN NATIONAL FINANCIAL EDUCATION PROGRAMS AND STRATEGIES

POLICY RECOMMENDATIONS TO INTEGRATE VULNERABLE GROUPS INTO AN NFES

PRE-FORMULATION

Conceptualization
1. Take stock of existing policies around the target group

Diagnostic and analysis
2. Ensure an evidence-driven approach through diagnostics and analysis
3. Map existing national strategies, policies and interventions

Governance structure and coordination mechanisms
4. Identify key stakeholder groups that work with the target group

FORMULATION

Identify policy priorities
5. Formulate a strategic vision, goals and targets based on the current state of the target group’s financial inclusion and its barriers

Develop an implementation plan
6. Integrate the target group in the implementation plan of existing/new financial education programs
7. Design well-defined financial education interventions for the target group and efficient delivery channels

Develop a monitoring and evaluation framework
8. Establish a M&E framework that integrates targets and indicators for the target group

IMPLEMENTATION

Rollout the program
9. Reinforce awareness and capacity
10. Coordinate ongoing multisectoral engagement

Conduct monitoring and evaluation
11. Monitor and report on target group indicators

MONITORING AND EVALUATION

CROSS-CUTTING ISSUES: Digitalization and the Global Crisis
2.2. WOMEN

Women face many social, economic and structural barriers that limit their opportunity to being economically active and productive. Women also typically demonstrate lower self-efficacy with financial services and financial decision-making.

They have lower financial well-being scores than men, which affects their ability to secure a financial future and participate in economic and financial activities (OECD, 2020). Financial education is one of the solutions to overcoming lower levels of financial literacy among women, given the barriers they face such as access to education, employment and formal financial services (UNESCO, ILO, World Bank).

Financial education must be targeted to women as they typically take primary responsibility for day-to-day household financial management such as expenditures on food, clothing and education for children. It is central to understand women and girls’ heterogeneity as population groups and the need to recognize the different lived experiences throughout their life cycle from adolescence, independence to marriage, parenting and old age. Neither ‘literacy’ nor ‘women’ should be seen as a homogenous category; both gendered identities and literacy practices develop and shift over the lifecycle and according to contexts (UNESCO, 2016).

PRE-FORMULATION

1. Take stock of existing women’s policies to strengthen financial education

Policy priorities should be set that tackle the gender differences between women and men’s financial access and usage⁹. AFI members attribute specific policy areas that are pertinent to advancing women’s financial inclusion, such as agents and corresponding business policies, policies on digital financial services, financial education, KYC norms and alternative collateral mechanisms, microcredit, cash transfer programs, credit guarantee schemes and women’s empowerment funds (AFI, 2017a).

Bridging the Gender Gap: Promoting Women’s Financial Inclusion (2017)
> View here

POLICY CONSIDERATIONS

9 A key commitment within the AFI Denarau Action Plan is to “consider and implement best practices in integrating policies for [women] financial inclusion within national financial inclusion strategies,” moreover, to “develop knowledge products to support this work.” This Guideline Note applies the same rationale for financial education considerations.
2. Ensure an evidence-driven approach through diagnostics and analysis of different sub-groups of women and their specific needs and preferences

Women are not a homogenous group and should be identified into different sub-groups to ensure the program is relevant to their varying financial education needs. Various sub-segments of women may include youth, older persons, single mothers, those living with a disability, migrant women, rural women10 and entrepreneurs11, thus considering their age, lifecycle, marital status, education, geographic location and type of employment. The financial education needs and preferences12 of women must be identified through some type of diagnostic to integrate them into the program’s design, including the collection of sex and age-disaggregated data (SADD).

MALAWI ANALYZES DIAGNOSTIC THROUGH A GENDER LENS

In 2018, the Bank of Malawi conducted a Household Financial Literacy and Capability Survey, as a follow-up to the same survey in 2014 and with a view to developing Malawi’s NFES. The results of the survey revealed that the access and usage rate of bank savings accounts among women was nearly half that of their male counterparts (21.1% versus 39.1%). It also revealed that women apply for formal credit less than men do (5% versus 13.8%), plan less for expected events than men do (47% versus 54%) and have lower literacy levels (25% of women answered either zero, one or at most two of the seven financial literacy questions correctly, while only 12% of the male population fall into these two groups).

3. Undertake a mapping of existing national strategies, policies and interventions for women

A first step in the diagnostic and analysis is to identify how financial education aligns with existing national policies, programs and priorities. This may include a National Financial Inclusion Strategy (NFIS), policies targeting women and government programs targeting low-income households. According to the 2020 AFI survey on gender and women’s financial inclusion, a third of AFI Members surveyed (34%) said they had a financial inclusion strategy with an explicit focus on women’s financial inclusion.

4. Identify key stakeholder groups that work with women

The buy-in and participation of different stakeholders (cf. Annex A) representing the public and private sectors and civil society that target women must be secured. This may include the Ministry of Gender, non-profits targeting different groups of women and women’s associations. Women should be integrated into key stakeholder groups so they have a voice in the decision-making process which further ensures the financial education program is grounded in the realities of key gender-related challenges. This may be achieved through the formation of a financial education working group for women that integrates key stakeholders representing a range of sectors.

### TABLE 1: EXAMPLE OF COUNTRIES INTEGRATING WOMEN IN NATIONAL FINANCIAL INCLUSION INITIATIVES

| Countries NFIS including a gender focus/target | Burundi, Eswatini, Ghana, Liberia, Madagascar, Malawi, Nige-ria, Rwanda, Sierra Leone, Tanzania, Uganda, Zambia, Zimba-bwe, Afghanistan, Cambodia, Pakistan, Haiti, Mexico, Peru, Jordan, Egypt, Morocco, Palestine, Tunisia, Fiji, Papua New Guinea, Samoa, Solomon Islands, Timor-Leste, Vanuatu |
| Countries with programs to support women’s leadership at the institutional level | Democratic Republic of the Congo, Malawi, Nigeria, Rwanda, South Africa, Zambia, The Philippines, Egypt, Morocco, Tun-i-sia, Fiji, Papua New Guinea, Solomon Islands |

Sources: AFI GIF Survey 2020.

### FORMULATION

5. Formulate a strategic vision, goals and targets based on the current state of women’s financial inclusion and any main barriers

The purpose of women-specific activities in the NFES should be aligned with demand-side research to ensure it is directly relevant to the local context.

---

10 Soon to be published: AFI’s Guideline Note on financial inclusion in rural areas.
12 These needs and preferences may include identified gaps in financial knowledge, skills, attitudes and behaviors related to a specific topic such as daily financial management; long-term planning, saving and investing; use of financial services; building resilience and consumer protection. The learning preferences relate to when (e.g. frequency, time of day) and how they like to receive the information (e.g. training workshop, radio program).
6. Integrate women into the implementation plan of existing/new financial education programs

The diagnostic findings must be used to prioritize the type of content for a financial education program and the type of delivery channels to best reach women. These needs and preferences, however, may vary by the different segments of women. A mix of high touch (e.g. face-to-face) and low-touch (e.g. virtual, online, mobile technology) delivery channels may be needed to reach low-income women. The content should include examples of women playing a key role in financial management and financial decision-making within the household.

7. Design well-defined financial education interventions for women and efficient delivery channels

Financial education for women should be delivered through effective, appropriate and innovative channels. Examples of teachable moments when women may be more receptive to financial education, include when gender norms relax such as during moves, marriage, the birth of a child, and crises. Leveraging existing infrastructure, such as women’s groups and networks can increase their participation and motivation. This may include savings and credit groups, church groups and associations.

8. Establish a M&E Framework that integrates targets and indicators for women

Ensuring that sex-disaggregated data is collected and analyzed during the ongoing tracking of performance is central in the creation of the associated monitoring and evaluation framework, assuming that sex-disaggregated objectives and targets have been created (AFI 2017a).

**CHILE INTEGRATES TEACHABLE MOMENTS FOR WOMEN IN ITS NFES**

Chile plans to integrate financial education in its national social programs to be delivered by trained program staff, beginning with employees at the Ministry of Social and Household Development and those who work with beneficiaries of the Solidarity and Social Investment Fund (FOSIS in Spanish) government program, namely poor and vulnerable adults, and youth. Currently, FOSIS provides group financial education workshops on budgeting, savings and responsible use of financial products and services for adults that offer free childcare. Chile identified other teachable moments and touchpoints to reach women with financial education in the NFES including, but not limited to: receiving salaries, wages or social benefits; starting or growing a business; applying for credit; saving for retirement; making home improvements or daily purchases; making a family budget; paying school expenses; and planning special family or traditional events.

---

13 For example, women in rural areas may prefer to learn in a group setting while those in urban areas may prefer one-on-one counselling.

14 Marriage can be used as a touchpoint to promote shared financial power and decision-making such as through joint savings accounts, household budgeting tools and guides for joint decision-making (IDEO, 2020).

15 In some cases, FSPs lend to women’s groups using cross-guarantees and ensure that financial education/information is disseminated to a particular group before a loan is disbursed. Further reading: Upscaling and Integrating Gender Savings Groups into the Formal Financial System (AFI, 2021).
IMPLEMENTATION

9. Reinforce awareness and capacity including supporting the competencies of female trainers or teachers to deliver financial education to women

As mentioned previously, women lack both power and confidence in financial decision-making and management within the household. To increase their motivation, confidence, and participation, it is important to build the capacity of female trainers and teachers in both financial education content and through interactive, experiential methodologies appropriate to the different sub-groups of women.

SOLOMON ISLANDS BUILDS CAPACITY THROUGH A COACHING PROGRAM FOR WOMEN SAVINGS GROUPS

The Make Money Work for a Better Future Financial Coaching Program was developed by the Central Bank of Solomon Islands (CBSI) in partnership with Good Return and the Asian Development Bank to increase the financial capability of Solomon Islanders and align with the Solomon Islands NFIS (2016-2020). The program uses a cascade approach to training, building the capacity of coaches first through a one-week training-of-coaches program, typically in small groups of 15 to 20 people. CBSI conducted two pilots in 2018 and 2019 to train coaches to deliver a seven week program with women's savings groups.

Examples of the best practices of these sessions and details are available in Annex G.

10. Ensure effective multi-stakeholder coordination and participation and organize ongoing multisectoral engagement

In addition to traditional education stakeholders, two important ways to adopt a community-wide approach include developing partnerships with community organizations and religious institutions that target women and gaining the support of women gatekeepers such as spouses, other family members and community leaders\(^\text{16}\). It is equally important to identify ways in which men can be included and brought into the discussions to become allies\(^\text{17}\).

11. Conduct ongoing monitoring and evaluation to ensure women are positively impacted

Gender-sensitive targets for the financial education program should be directly aligned with the financial education needs identified during the diagnostic stage. Data should be collected on a routine basis that is disaggregated by sex, age and other relevant segments\(^\text{18}\). Ongoing monitoring will measure the progress of these targets while evaluation will ensure the program’s positive impact on women.

12. Special Consideration: Align in-person financial education activities with the needs and demands of women

Women face many demands on their time that require them to juggle competing priorities such as work, childcare and domestic duties, further reinforced with the double burden of unpaid domestic and care work often amplified during a time of crisis\(^\text{19}\). The distance to the learning venue also needs to be considered as most women are not keen to travel long distances to receive training. Offering childcare and flexible hours to take part will encourage more consistent participation of women in financial education activities, and may also be necessary to offer alternative methods to access the content\(^\text{20}\).

---

\(^\text{16}\) Women leaders at the community level can also serve as financial education champions, ambassadors and trusted peers by bringing training to local community access points and accessible locations, and encouraging behavioral change while their male counterparts can be brought in to act as change agents for other men, helping breakdown social and cultural norms that restrict women’s opportunities.

\(^\text{17}\) Potential male allies/advocates can come in various forms from policymakers, community leaders, educators, to fathers, who are often regarded as the primary head of households in many of the developing countries. “The transformative power of education for girls and their allies cannot be overstated. It’s a golden opportunity to tackle the harmful gender stereotypes that hold girls back, and to provide children of all genders with the knowledge they need to make safe and empowered decisions about their own bodies and futures.” (GPE, 2019)

\(^\text{18}\) For example, occupation, geographic location, education level, marital status, etc.

\(^\text{19}\) Further reading: Why the economic response to COVID-19 needs to be financially inclusive and gender sensitive (AFI, 2020).

\(^\text{20}\) For example, online, recorded, mobile phone app, social media forum groups.
2.3. YOUTH

Youth21 in developing countries face many barriers as they transition from adolescence to adulthood that make them a vulnerable market segment. Some of these barriers include a lack of appropriate education and vocational training, lack of employment opportunities in the formal sector, inadequate support networks to obtain a job or start a business, limited access to finance and lack of youth-friendly policies.

Targeting youth in a financial education program can help them invest in their education, gain access to stable employment, start or grow a business and be better prepared for a crisis or the different transitions from youth to adulthood as they assume more responsibilities and make better financial decisions as they require a range of financial services. In addition, youth often share financial education information with their parents leading to a multiplier effect. As a result, this contributes to the prospects of improved livelihoods and realizing their full economic potential.

REFERENCE AFI PUBLICATIONS

Youth Financial Inclusion Policy Framework (2021)
> View here

Integrating Youth into a National Financial Inclusion Strategy Guideline Note (2020)
> View here

POLICY CONSIDERATIONS

PRE-FORMULATION

1. Take stock of existing youth policies to strengthen financial education

Youth financial inclusion “involves multiple, intersecting facets with policies relating to education, entrepreneurship promotion, life skills education, women/girl’s financial inclusion and rural development. Youth financial inclusion is an important layer of all of these policies, and a multifaceted, coordinated policy effort will enable a sustainable youth strengthening agenda with real results” (AFI, 2020e).

2. Ensure an evidence-driven approach through diagnostics and analysis for different sub-groups of youth and their specific needs and preferences

Youth are not a homogenous group and should be identified in different sub-groups such as age range (early adolescence, adolescence, young adulthood), orphans and vulnerable children (OVCs), migrant children or children of forcibly displaced persons (FDPs), young girls, rural youth, youth entrepreneurs and youth in the informal sector. Once these sub-segments are defined, they can be included in a diagnostic22 to assess existing financial behaviors and gaps in financial knowledge, skills and attitudes.

MALAWI CONDUCTS A STUDENT-TEACHER FINANCIAL LITERACY SURVEY

In 2016, the Reserve Bank of Malawi conducted a financial capability survey of students and teachers. The survey results were used to inform the design and implementation of youth financial education curricula and activities. In addition, some of the indicators from the survey were used to develop the Monitoring and Evaluation Toolkit.

21 The age range of youth varies depending on a country’s definition and is typically defined in a National Youth Policy. The UN and ILO define youth as 15 to 24 years of age but in many countries including in Africa, the limit extends until 35. This age range has been used to capture the transition period from childhood to adulthood.

22 To develop a more precise understanding of the different characteristics, financial education needs and learning preferences of youth, policymakers and regulators need to systematically collect data disaggregated by age, sex, as well as other context-appropriate variables taking into consideration the different life stages or transitions from adolescence to adulthood. Results from this type of diagnostic can shed light on the different financial behaviors or competencies of youth (e.g. knowledge, skills, attitudes and behaviors).
3. Undertake a mapping of existing national strategies, policies and interventions for youth
AFI’s Youth Policy Framework stresses that the analysis conducted while mapping existing strategies should examine age restrictions, collateral, guarantees and KYC requirements, as well as youth-friendly policies and initiatives implemented to date and the implications for youth across different life stages.

| Countries with other national programs for youth | KYC policies: Eswatini, Zambia, Egypt, Palestine
SMEF policies: Angola, Ghana, Eswatini, Mozambique, Zambia
Mexico, Malaysia, Cambodia, the Philippines, Palestine, Fiji
Data: Angola, Burundi, Eswatini, Zambia, Tanzania, Mexico, Peru, Malaysia, the Philippines, Palestine |

4. Identify key stakeholder groups that work with youth
Stakeholders (cf. Annex A) representing the public and private sectors and civil society should be identified who can work with in-school and out-of-school youth to leverage existing programs, resources, infrastructure and capacities and identify any gaps. Youth stakeholders may include the Ministry of Youth, Ministry of Education, parent-teacher associations, youth serving organizations (YSOs), schools, and technical and vocational educational institutes (TVETs)²³.

FORMULATION

5. Formulate a strategic vision, goals and targets based on the current state of youth financial inclusion and the main barriers
Effective youth financial inclusion calls for integrating gender-sensitive youth-inclusive language and measures throughout the NFIS — from the vision and overarching goals to the concrete actions to be undertaken (AFI, 2020e).

6. Integrate youth into the implementation plan of existing/new financial education programs
At the beginning of the implementation phase, the NFES implementation plan should break down each youth-specific action into more granular activities with specific outputs and timing (see Annex B). The example of Zambia’s NFES Action Plan for Children and Youth is available in Annex F.

BELARUS TO INTEGRATE FINANCIAL EDUCATION OF SCHOOL CHILDREN AND YOUTH AS A STANDALONE SCHOOL SUBJECT²⁴

In 2019, the government of the Republic of Belarus and the National Bank of the Republic of Belarus approved the new Joint Action Plan of Government Agencies and Financial Market Participants on Enhancing Financial Literacy for the next six years. One of the main tasks of this action plan is to reach out to a large group of school children and youth and ensure their financial literacy.

²³ USAID’s Positive Youth Development (PYD) framework shows the need to engage youth at a high level by creating opportunities for their voices and leadership through youth decision-making in various levels of government. This may include youth as active participants or representatives in governance bodies and advisory boards such as a Financial Education Working Group for Youth with representatives from a range of sectors.

INTEGRATING VULNERABLE GROUPS IN NATIONAL FINANCIAL EDUCATION PROGRAMS AND STRATEGIES

Teachable moments for youth may include daily activities with their parents, such as grocery shopping, and may also include more independent activities, such as receiving their first allowance (see the example of Chile below).

SEYCHELLES ADOPTS A PEER EDUCATOR MODEL TO MOTIVATE YOUTH ON FINANCIAL EDUCATION

Global best practices indicate the need to use a peer educator model during the implementation phase to increase youth motivation and participation. In December 2020, the Central Bank of Seychelles, in collaboration with the National Financial Education Secretariat, launched Youth 4 Youth - a youth ambassadors’ program that aims to empower youth and encourage peer-to-peer learning and advocacy on financial education.

The one-year program, which targets youth between 16 and 30 years of age, is currently recruiting financial education ambassadors to build their knowledge and skills in various related topics such as personal financial management, identifying and avoiding fraud, use of financial services (e.g. insurance) and investing along with other skills such as effective peer counseling, communication skills and use of social media.

7. Design well-defined financial education interventions for youth and efficient delivery channels

For example, younger youth may prefer games or play-based activities while older youth may prefer small group activities, discussions, stories or simulations. Basic content such as money management or savings may be more appropriate for younger youth, while more advanced topics such as credit management, consumer protection, entrepreneurship or data privacy may be more appropriate for older youth when they can access such services.

UZBEKISTAN AND THE FINANCIAL EDUCATION OF SCHOOL CHILDREN AND YOUTH AS AN EXTRACURRICULAR ACTIVITY

In the Republic of Uzbekistan, extracurricular activities on financial education have been prioritized to improve children’s financial literacy.

The Central Bank of the Republic of Uzbekistan has conducted international campaigns, visits to financial institutions, contests, tests and summer educational projects since 2019. International campaigns, such as Global Money Week and World Savings Day, brought together 26 commercial banks and 17 stakeholders and reached out to about 20,000 students throughout the country in 2020.

8. Establish a M&E Framework that integrates targets and indicators for youth

Youth-related targets for the financial education program should be set and monitored ensuring they align with the financial education needs of youth identified during the diagnostic. Data collection for these targets can be disaggregated by age for the different stages from adolescence to adulthood, by sex and other relevant segments (e.g. enrolment status, geographic location, occupation, etc.). An evaluation of the program will ensure the intended impact on youth.

CHILE INTEGRATES TEACHABLE MOMENTS FOR YOUTH IN ITS NFES

Chile included the following teachable moments or touchpoints to deliver financial education to youth in its NFES:

- Making purchases at the supermarket with their family
- Managing their allowance
- Saving for a vacation
- Planning a field trip
- Opening an account at a savings kiosk in school
- Making purchases through the internet
- Earning an income from their first job
- Obtaining their first debit or credit card
- Taking a student loan to study at university
- Contributing in response to the death of a family member
- Retirement of a grandparent
- Sickness or accident on the job

SEYCHELLES AND MALAWI INTEGRATE YOUTH INDICATORS IN THEIR M&E FRAMEWORK AND TOOLS

To capture the savings culture among youth, the government of Seychelles measures the number of youth savings accounts as a key indicator at the national level. This indicator will be included in future financial capability surveys to capture both a baseline and endline.

The Reserve Bank of Malawi has integrated indicators from its Student and Teachers Financial Literacy and Capability Survey conducted in 2016 into an M&E toolkit. The indicators to show improvements in knowledge, confidence and financial management skills among students and teachers include:
> # of students with bank accounts
> # of students developing and using budgets
> # of students knowledgeable in key financial terms
> # of teachers knowledgeable in key financial terms
> # of teachers developing and using budgets

BHUTAN’S YE BANKING APPLIES INNOVATIONS TO FINANCIAL EDUCATION

In 2018, the Royal Monetary Authority (RMA) in Bhutan introduced the concept of Youth Ethics (YE) Banking to bring more youth into the banking system. The program, targeted at youth below the age of 18, aims to educate them on the importance of lifelong financial skills, such as saving, in an inclusive and appropriate delivery format and to enhance their academic understanding, ethical values and financial capabilities.

IMPLEMENTATION

9. Reinforce awareness and capacity including building the competencies of female trainers or teachers to deliver financial education to youth

Building the capacity of local YSOs and schools to deliver financial education to youth is necessary to reach out-of-school youth and for teachers at schools to reach in-school youth with financial education. Training-of-trainers workshops should focus on the technical content of financial education themes identified and prioritized during the diagnostic and youth-focused methodologies that promote a safe and interactive environment.

10. Ensure effective multi-stakeholder coordination and participation and manage ongoing multi-sectoral engagement

Institutions working at the community level with youth (cf. Annex A) must be engaged from the beginning of any financial education program given their enormous role. This may involve introductory meetings with parents or caregivers in a school or community setting, or connecting them with services, resources and tools through partnerships with community organizations which can help them improve their own financial capabilities and well-being so they can model positive financial attitudes and behaviors towards their children.

11. Conduct ongoing monitoring and evaluation to ensure youth are positively impacted

When a youth financial inclusion strategy is being integrated into the NFIS, the monitoring system should also include gender-sensitive indicators specific to youth financial inclusion (AFI, 2020e).

12. Special Consideration: Build the capacity of peer educators to deliver financial education to youth

Many international youth programs such as UNCDF’s YouthStart have demonstrated the value of the peer educator model for youth as it promotes motivation and participation by creating a safe environment. Peers are often another key influencer of youth, together with youth who are slightly older or who have graduated from a similar program and can take on a mentorship role. This can be done through a training workshop to build their knowledge in financial education topics along with their facilitation skills.

SIERRA LEONE ENGAGES YOUTH LEADERSHIP

It is important to engage youth leadership and encourage decision-making at a high level through representation in governance bodies and advisory boards. The Central Bank of Sierra Leone integrates youth as key stakeholders in each of the Financial Inclusion Working Groups: financial literacy, financial products and services, financing for MSMEs and digital financial services.

26 When children participate in activities related to ethics and financial capabilities such as quizzes, morning speeches, financial clubs, crafting money boxes, participating in Global Money Week, dramas, essay competitions, story writing, poem, debates, art, game designs and songs, they are rewarded with Dummy Bank Notes (DBN) that are then pegged to Bank Points (BP). Children also receive points for opening bank accounts and making deposits into their account. The Bank Points earned during the year then get converted into real money on an annual basis during the Annual Incentive Camp. This money is then deposited into a children’s savings account called “My YE-Banking Passbook” issued by the school.
2.4. FORCIBLY DISPLACED PERSONS

When designing a financial education program for the forcibly displaced, it is important to first identify the forcibly displaced persons (FDPs) residing within the country. FDPs are generally an invisible market segment given there is very limited financial inclusion data on them, and they typically participate in the informal economy.

There are many barriers that FDPs face which limit their access to and use of financial services in the host country. This includes low levels of trust and confidence in the financial system, language barriers, limited social and support networks, low levels of education and financial literacy and a lack of proper documentation to satisfy KYC and CDD requirements (AFI 2017).

Refugee women are at a particular disadvantage due to their gender and their refugee status. A recent study in six refugee hosting countries (Germany, Jordan, Lebanon, Turkey, Uganda, and the United States) found that across all countries, refugee women were less likely to be engaged in paid work, had lower incomes, and were more discriminated against than the men and women of their host country (RescueWorks and the IRC, 2019).

- Roadmap to the Sustainable and Responsible Financial Inclusion of Forcibly Displaced Persons (2019) > View here

POLICY CONSIDERATIONS

PRE-FORMULATION

1. Take stock of existing FDPs policies to strengthen financial education

Some jurisdictions have specific strategies, policies and action agendas governing the integration of FDPs that the strategies must be aligned with to ensure coherent policy actions. This includes FDPs’ “rights to legal identity and documentation, and the relationship of documents provided to those who have been forcibly displaced with KYC and CDD requirements. Other policy responses should also be considered, including the country’s uptake of the Comprehensive Refugee Response Framework (CRRF)” (AFI, 2020f).

2. Ensure an evidence-driven approach through diagnostics and analysis for different sub-groups of FDPs and their specific needs and preferences

FDPs include stateless persons, refugees, asylum seekers, returnees, and IDPs. Policymakers can also decide to broaden the group to include migrants, as the financial needs and displacement phases can sometimes be similar among migrants and FDPs, though their legal access to financial services may differ. FDPs also differ based on their age, gender, country of origin, location, displacement phase and type of assistance they receive. As part of the diagnostics and analysis, SADD must be collected and analyzed in order to accurately define the FDP groups residing in the host country and to understand their unique characteristics, financial education needs and learning preferences.

JORDAN INTEGRATES FDPs IN THEIR NATIONAL DIAGNOSTIC STUDY

In 2017, the Central Bank of Jordan conducted a national diagnostic study that included both formal and informal refugees in the sample and gathered information on their use of deposits, savings, credit, payments, and insurance products disaggregated by

27 FDPs can refer to stateless persons, refugees, asylum seekers, returnees and internally displaced people (IDPs). They may be forcibly displaced due to conflict, persecution, violence, or human rights violations. It should be noted, however, that there is an indication of a gradually shifting global narrative about who we define as FDPs, for example, to include those forcibly displaced by climate change and disasters (AFI, 2021).

28 This relates directly to the economic, financial, socio-cultural and behavioral barriers they face. Collaboration with the ministry handling forced displacement affairs for the country and the UNHCR would be helpful to ensure data collection efforts are not duplicated.
sex, age, and geographic area. The diagnostic also evaluated the level of financial literacy of refugees by asking six questions covering the following topics: simple interest, compound interest, risk diversification, simple inflation, complex inflation and deposit insurance. The survey showed that the lowest levels of financial inclusion and financial literacy in the country were among its roughly 2.7 million refugees.

3. Undertake a mapping of existing national strategies, policies and interventions for FDPs

Upon a review of such existing strategies and initiatives, a country can identify, align and prioritize relevant activities for FDPs within the NFES.

4. Identify key stakeholder groups that work with FDPs

These stakeholders (cf. Annex A) may already have analyzed data, strategies or programs in place for the financial education of FDPs. Coordinating with humanitarian partners such as UNHCR and critical service providers will help to reach particularly vulnerable FDPs in the refugee camps. Best practices (see Annex C) indicate the need to integrate the vulnerable target group into key stakeholder groups. This may include seeking the participation of FDPs in a coordinating body such as a financial education or financial inclusion working group for FDPs to give them a voice in the decision-making process and ensure the program is properly designed.

### FORMULATION

5. Formulate a strategic vision, goals and targets based on the current state of the FDPs financial inclusion and main barriers

These elements should be concretized by clearly stating the business case for the financial inclusion of FDPs who represent a new potential customer base for FSPs. Each country’s FSP ecosystem for FDPs will differ but building the business case within the national education program will contribute to correcting widespread misconceptions about FDPs as a client segment, and understanding the potential for FSPs to further engage with them (AFI, 2020f).

6. Integrate FDPs into the implementation plan of existing/new financial education programs

The multi-stakeholder Roadmap to the Sustainable and Responsible Financial Inclusion of FDPs calls for the integration of FDPs’ needs into national strategies and regulations (GIZ, AFI, 2020). Table 6 highlights Tanzania’s financial education delivery approach for refugees.

### TABLE 5: EXAMPLE OF COUNTRIES INTEGRATING FDPs IN NATIONAL FINANCIAL INCLUSION INITIATIVES

7. Design well-defined financial education interventions for FDPs and efficient delivery channels
The financial needs of FDPs often vary according to the length or stage of their displacement phase. This directly affects the financial education content that may be most relevant to them during the different stages. For example, daily money management and planning ahead may be more appropriate during the earlier stages while use of financial services might be better suited at a later stage.

Touchpoints to reach FDPs with financial education might include border checkpoints, refugee camps, pre-departure orientation, integration and training programs, migration centers, employment centers, health and cash assistance and traditional and digital payment providers. Teachable moments when FDPs are most receptive to financial education may include when they are receiving humanitarian cash transfers or remittances from families in their home countries - by highlighting the benefits of saving part of this money for future goals.

8. Establish a M&E Framework that integrates targets and indicators for women
The M&E targets for FDPs may include indicators on money management and the use of traditional and digital financial services for the different stages of displacement. Data should be routinely collected and evaluated disaggregated by age, gender, country of origin and other relevant indicators (e.g. location, displacement phase and type of assistance) to ensure a positive impact of the program on FDPs.

9. Reinforce awareness and capacity including building the competencies of female trainers or teachers to deliver financial education to women
A way to integrate the host community is to build the capacity of culturally sensitive members from the host community to deliver financial education to FDPs. This may include people who were formerly forcibly displaced and are at a later stage in the displacement process, people who have migrated from another country or people that are empathetic and sensitive to the challenges and financial education needs of the forcibly displaced. Integration can be achieved through an in-person or virtual training-of-trainers workshop to introduce the program, build facilitation skills, and improve the awareness of technical content appropriate for FDPs.

TANZANIA ADOPTS A MULTI-CHANNEL DELIVERY APPROACH FOR FDPs
The Bank of Tanzania introduced merchant payments as part of an initiative to enhance the digital financial service eco-systems in refugee camps.

In 2017, UNCDF Tanzania launched a program in partnership with UNHCR and international and local NGOs to improve access to finance in the Nyarugusu refugee camp through savings groups, digital and financial literacy interventions, and advocacy. The detailed case of Tanzania’s multi-channel delivery approach is available in Annex H.

UGANDA ESTABLISHES A WORKING GROUP FOR FDPs
As part of its commitment to FDPs, the Bank of Uganda established in its NFES a working group for FDPs as part of its special interest group, one of five key target segments along with children below the age of 15 and people with disabilities. The other four working groups focus on other vulnerable market segments such as youth, women, rural and workplace.

The NFES has proposed key stakeholders for this working group which include the Bank of Uganda, the Office of the Prime Minister, Refugee Law Project, Norwegian Refugee Council Kampala, the Archdiocese of Kampala, UNHCR, International Refugee Rights Initiative, Refugee and Hope International, and UNCDF.

29 It is important to align the terminology and technology associated with the new financial landscape in the host country with the financial landscape in the home country. It is also important to recognize that payment services, such as remittances and cash transfers (e.g. humanitarian aid), serve as a gateway to other formal financial services as this may be the first financial product they use and have experience

30 It is more challenging to leverage existing groups and networks for FDPs as many were established within the home countries they left behind. However, FDPs will establish new support groups and networks in the host country as they move through the displacement phases and these can be leveraged to deliver financial education. Furthermore, instances of protracted displacement are currently increasing which makes this more likely (UNHCR 2021).

31 Further reading: Financial literacy transforms refugee livelihoods (Uganda example) - https://www.afi-global.org/newsroom/blogs/financial-literacy-transforms-refugee-livelihoods/
10. Ensure effective multi-stakeholder coordination and participation and manage ongoing multi-sectoral engagement

While FDPs face specific vulnerabilities, including psychological trauma, lack of opportunities and protection risks, host communities struggle to pursue their own development efforts in an environment that has been transformed by a large influx of newcomers. As displacement has become increasingly protracted, the responses are becoming progressively focused on durable solutions to support more dignified, inclusive and comprehensive programs for refugees and the communities that host them. It is also important to reduce the divide between the host community and the home community. This may involve integrating content on building communication skills with members of the home community and creating achievable joint savings goals as the FDPs move through the various stages of displacement.

11. Conduct ongoing monitoring and evaluation to ensure FDPs are positively impacted

While the M&E of policy outcomes for FDPs is challenging for various reasons, this process should be included in the data frameworks during pre-formulation and used in the NFES formulation, implementation and M&E phases. An effective and well-resourced M&E system should be put in place and operationalized before implementation. Explicit targets and indicators for FDPs should be included in the M&E framework, alongside those of the other NFES target groups (AFI, 2021).

12. Special Consideration: Be sensitive to the data privacy concerns of FDPs

FDPs are, by nature of being displaced, more likely to be exposed to risks and may have even deeper privacy concerns than the average citizen. For example, those fleeing political persecution will have privacy concerns in terms of being tracked through geolocation or having their personal information provided to the wrong actor. Significantly, they are less likely to be able to provide truly informed consent. It is important to ensure that data privacy regimes support cross-border supervisory and regulatory cooperation arrangements in addition to building the trust of FDPs in formal financial institutions through financial education to help overcome some of these data privacy concerns.

2.5. OTHER VULNERABLE GROUPS

The analysis and recommendations highlighted in this Guideline Note on women, youth and FDPs can be applied to additional vulnerable groups on a case-by-case basis depending on the country’s context. This section provides additional considerations for other vulnerable groups such as older persons and persons with disabilities.

OLDER PERSONS

Older persons, defined by the UN as those above the age of 60, face many social and economic barriers. Financial account ownership decreases in low and middle-income countries as adults reach their mid-60s, who then have lower financial literacy, financial well-being and financial behavior scores across most countries. Lower financial literacy levels may be associated with cognitive decline (e.g. memory loss) that occurs at a later life stage (OECD, 2020, Fin Lit Survey).

Older persons also have lower digital financial capabilities due to a lack of familiarity and confidence, low levels of trust and visual or hearing impairments that make it difficult to use the phone or ATM (AGE UK, 2016). The social and economic barriers associated with old age are often greater for women as they have greater longevity than men, lower levels of financial literacy and use fewer financial services (OECD 2017, Global Findex 2017, WEF, 2018).
At a macro level, financial education for older persons can lead to greater stability in the financial system and a decrease in pressure on public pension schemes by increasing formal savings. At the supply and provider level, this can lead to increased demand for new or additional financial products and services, while at the consumer/demand level, this can lead to improvements in lifetime financial planning, inter-generational equity and a decrease in old-age poverty.

PERSONS WITH DISABILITIES

Persons with disabilities (PWDs) also face many social and economic barriers such as lower incomes and savings, socio-cultural stigmatization, weaker social networks and fewer assets. They rely on services that incur additional costs such as assistive devices, health services, accessible transportation and personal assistance (Banks, et. al., 2021).

Additionally, PWDs are less likely to complete primary, secondary and tertiary education than people without disabilities, spend fewer years in school and have lower literacy rates. Youth with disabilities face many barriers in school that limit their learning such as communication with peers and teachers, lack of assistive materials, lack of teacher capacity with this segment and physical access constraints.

Financial education can help PWDs become active participants in their communities, gain independence from other family members and caretakers through financial self-reliance and earn respect within their communities while increasing their confidence by more actively using formal traditional and digital financial services.

PRE-FORMULATION

1. Take stock of existing policies for older persons and PWDs to strengthen financial education

Existing policies and policy priorities for these target groups include enhanced and targeted financial inclusion data and evidence, digital and financial literacy, lifetime financial planning, harnessing inclusive technologies and tackling financial abuse and fraud of older persons and PWDs.

2. Ensure an evidence-driven approach through diagnostics and analysis of different subgroups and their specific needs and preferences

There may be different ways to segment older persons such as by age, gender, geographic location, marital status, and those with or without a disability and type of disability. More vulnerable sub-groups of older persons may include widows, rural older persons and older entrepreneurs. The results from the diagnostic will help customize the program, for example, focusing on consumer protection to empower older persons to avoid any type of financial exploitation. Building the digital financial capabilities of both segments will help overcome access to financial services due to mobility, physical and cognitive constraints.

3. Undertake a mapping of existing national strategies, policies and interventions for older persons and PWDs

This exercise may include a NFIS and specific policies targeting older persons and PWDs.

COSTA RICA’S NATIONAL POLICY ON AGING AND OLD AGE

In 2021, the office of the President of Costa Rica published the Política Nacional de Envejecimiento y Vejez (National Policy on Aging and Old Age) 2011-2021, designed to address policy challenges for older persons. The policy’s five aims are to: Promote ageing with a quality and satisfactory life; improve the quality of life of older adults; overcome conditions of social exclusion; reduce hunger and poverty in the elderly population, in conditions of vulnerability; and guarantee the protection and social security of the elderly.

33 PWDs are often excluded from formal financial services due to low self-esteem, exclusion by other group members in community-based financial services, exclusion by staff of financial institutions, and exclusion by service design that limits physical access (AMFIU, 2009). Similar to other vulnerable groups, PWDs face social barriers such as negative stereotypes, perceptions and attitudes among peers and staff at financial institutions in addition to often being perceived as a burden by family members or other community members.

34 See the G20 Fukuoka’s Eight Policy Priorities on Aging and Financial Inclusion (GPFI).

35 See the G20 Fukuoka’s Eight Policy Priorities on Aging and Financial Inclusion (GPFI).
4. Identify key stakeholder groups that work with older persons and PWDs

Key stakeholder groups (cf. Annex A) may include organizations from civil society already working with these groups, older persons’ associations and PWD rehabilitation centers. Integrating other family members and caregivers in financial education program activities with older persons and PWDs can facilitate a more holistic programmatic approach.

5. Formulate a strategic vision, goals and targets based on the current state of financial inclusion and main barriers for older persons and PWDs

The purpose of specific activities for older persons and PWD in the NFES should be aligned with demand-side research to ensure it is directly relevant to the local context.

Activities to address problems faced by persons with disabilities were discussed and included in a roadmap for 2020-2021: “Priorities of the roadmap are the promotion of the updated national standard on digital inclusion for the blind and the development of technologies to teach financial literacy to people with intellectual disabilities. Financial literacy for vulnerable groups, especially the disabled, the elderly and people with mental disabilities, was also the topic of a detailed discussion at the working group meeting. The Association for Financial Literacy Development and the Institute of Correctional Pedagogy are working to create a glossary of financial terms for the disabled which will also be available in versions for the visually and hearing impaired.”

6. Integrate older persons and PWDs into the implementation plan of existing/new financial education programs

At the beginning of the operational phase, the implementation plan of the NFES should breakdown each specific action into more granular activities with specific outputs and timing for older persons and PWDs.

UGANDA’S NFES INTEGRATES PWDs AND FDPs

PWDs were targeted in Uganda’s NFES (2013-2017) as a key cross-cutting segment recognizing their unique needs across five segments: schools, youth, rural outreach, workplace and media. The action plan to reach PWDs includes key messages on money management, savings, risk management, planning for retirement and digital financial literacy while the delivery channels include classrooms, social media, drama clubs, holiday camps, debating and reading clubs, schools for the disabled, workshops and homes for the disabled. The Bank of Uganda established an action plan in its NFES (2019-2024) to reach FDPs which includes the rationale, key messages, delivery channels and stakeholders. The key messages focus on money management, planning ahead and the use of traditional and digital financial services. Delivery channels to reach FDPs include classrooms, drama clubs, broadcast media and refugee welfare councils while additional stakeholders include NGOs targeting refugees, host communities and also refugee welfare councils.

7. Design well-defined financial education interventions for older persons and PWDs, and efficient delivery channels

Teachable moments for older persons may include when they receive their pensions, remittance, or government payments, if they receive some type of public assistance. Touchpoints for the elderly may include convenience stores or markets, nursing homes, pharmacies, public transport providers, churches, or restaurants. Touchpoints for PWDs may include special needs schools, rehabilitation centers, churches, homes for the disabled and holiday camps.

MALAWI’S FINANCIAL EDUCATION PROGRAM TAILORED TO PWDs

The government of Malawi has implemented financial education activities specifically for in-school children and youth with disabilities. For the visually impaired, the government has translated all the existing financial education materials to Braille and in large print. The translated financial education materials were distributed to all resource centers for access and use by the target group.

36 http://www.cbr.ru/eng/press/event/?id=7988
37 Examples of teaching financial literacy for people with disabilities are available in Russian here: https://fincult.info/teaching/osobennosti-obucheniya-finansovoy-gramotnosti-lyudey-s-ogrаниченныvrierozmozhnosti-podoroxya/
INTEGRATING VULNERABLE GROUPS IN NATIONAL FINANCIAL EDUCATION PROGRAMS AND STRATEGIES

INDONESIA PROVIDES FINANCIAL EDUCATION TO OLDER PERSONS

In Indonesia, the Financial Services Authority (OJK) provides financial literacy to older persons to raise awareness about the risks of financial scams together with the necessary tools and skills so they can better protect themselves.

8. Establish a M&E Framework that integrates targets and indicators for older persons and PWDs

M&E indicators should reflect the financial education needs and different subgroups of older persons and PWDs as identified in the diagnostic. Their needs are usually directly related to the social and economic barriers they face (e.g. financial abuse, frauds and scams of older persons and discrimination of PWDs by family and community members leading to low self-esteem), and their learning preferences related to their type of disability (e.g. physical, mental).

IMPLEMENTATION

9. Reinforce awareness and capacity including building the competencies of trainers or teachers to deliver financial education to older persons and PWDs

Building the capacity of trainers or teachers will ensure they are equipped with the necessary tools to deliver financial education. It is therefore important to recruit trainers and teachers that already work with these segments and are familiar with Braille and sign language or can otherwise provide training in both capacities. This training can take place as pre-service or in-service training while qualified PWDs and older persons can also be recruited as trainers to utilize the peer educator model.

10. Ensure effective multi-stakeholder coordination and participation and coordinate ongoing multisectoral engagement

To ensure the program responds to the needs of older persons and PWDs and is grounded in their reality, it is important to elevate and integrate their voices into some of the key stakeholder groups mentioned previously or reserving seats for these groups in parliament, line ministries and local governments. It may also be necessary to form a working group specific to these segments.

11. Conduct ongoing monitoring and evaluation to ensure a positive impact on older persons and PWDs

M&E indicators should be routinely updated and evaluated to ensure the program’s impacts on these target groups are directly aligned with the indicators identified during the diagnostic.

12. Special considerations unique to each segment: Flexible timeline and schedule for older persons and PWDs

A flexible program schedule and timeline may be necessary as older persons and PWDs may take longer to complete the program requirements. The schedule and timeline can be identified during the diagnostic as it relates directly to their learning preferences.

iSAVE PROGRAM IN UGANDA AND MALAWI DELIVERS FINANCIAL EDUCATION TO PWDs

The Inclusive Economic Empowerment Program (iSave) is an wide-ranging microfinance program that targets women, men and youth with disabilities as well as their families and caretakers, and is implemented through a partnership involving the Association of Microfinance Institutions in Uganda (AFMIU), National Union of Disabled Persons of Uganda (NUDIPI), Federation of Disability Organizations in Malawi (FEDOMA) and District Disability Forums (DDFs) in Malawi.

11. Conduct ongoing monitoring and evaluation to ensure a positive impact on older persons and PWDs

M&E indicators should be routinely updated and evaluated to ensure the program’s impacts on these target groups are directly aligned with the indicators identified during the diagnostic.

12. Special considerations unique to each segment: Flexible timeline and schedule for older persons and PWDs

A flexible program schedule and timeline may be necessary as older persons and PWDs may take longer to complete the program requirements. The schedule and timeline can be identified during the diagnostic as it relates directly to their learning preferences.

The program works with local communities to establish village savings and credit groups for PWDs and their caretakers, improve the financial literacy and entrepreneurship skills of group members, link PWDs in rural communities with private sector development centers and build the capacity of MFI in disability inclusion. Notable activities included the TOT Workshop for PWDs showcasing successful examples of entrepreneurs with disabilities, translation of financial education materials to Braille and large print and an award for the most ‘disability-friendly’ MFI.
3. CROSS-CUTTING ISSUES

3.1. DIGITALIZATION

Technology, such as mobile phones and the internet, can be used to access financial services and financial education.

Digital Financial Literacy (DFL) publications provide guidance on the former while this section focuses on tools for the latter. Vulnerable segments such as women, youth, FDPs, older persons and PWDs face many challenges that limit their ability to access and use both digital financial services and digital financial education. This includes the following:

- Low trust and confidence in digital services (low touch) versus trust in face-to-face services (high touch)
- Limited access to information and communication technologies (ICT) such as mobile phones and the internet
- Lack of understanding, experience and comfort using technology to access financial services or education

| | Leverage technology to scale the program, and provide alternative, flexible means to introduce and reinforce content | Leverage existing adoption and familiarity with technology to serve as sources of information and instruction to others | Leverage existing government websites, online resources, and apps for migrants | Use accessible technologies such as digital books, speech synthesizers, websites, digital payments (e.g. to pay bills, loans), savings calendars, or SMS to provide warnings on scams |
Policy considerations

Providing financial education to these vulnerable segments through digital means is important as it offers a valuable alternative that is more flexible with accessible delivery channels to reach them. Some of these channels may already be in use for other services such as online and recorded video, SMS, mobile phone apps, social media, social media groups and forums, websites and digital tools such as payments, savings and loan repayment calendars. Accessible technology, such as digital books and speech synthesizers for PWDs and older persons, may also be an option.

Youth, who are often early adopters of technology and can use a mobile phone without any formal training, can serve as a catalyst or important source of information and knowledge to the other groups (New America Foundation, 2013). In most regions, the average mobile account ownership among youth is either comparable to or has surpassed that of adults (Global Findex, 2017).

PAKISTAN DEVELOPS AN E-LEARNING COURSE FOR YOUTH

The National Financial Literacy Program for Youth (NFLP-Y) was launched by the National Institute of Banking & Finance (NIBAF) in 2018. The program’s objective is to improve the money management skills and understanding of financial matters of in-school children, adolescents and youth across 45 selected districts of Pakistan.

NIBAF aims to reach 1.6 million children, adolescents, and youth through classroom training and digital learning platforms between 2018 and 2023. As part of this program, NIBAF developed an e-learning financial literacy course delivered through an engaging and interactive game, ‘PomPak - Learn to Earn.’ The financial literacy topics include money management, saving, budgeting, planning for the future, the formal banking sector, Islamic banking, and rights and responsibilities.

RWANDA AND JORDAN PROMOTE DIGITAL FINANCIAL LITERACY FOR FDPs

The National Bank of Rwanda (BNR) is collaborating with partners in refugee camps to raise awareness on consumer protection regulations and encourage adoption of digital payments. In 2019, UNCDF Rwanda launched the ‘Expanding Financial Access and Digital and Financial Literacy’ (REFAD) program that integrates digital financial education, designing and adopting client-centric financial products, and strengthening Village Saving and Loan Associations to provide rural and refugee communities with transformational, convenient, and affordable financial services that enable individuals and families to make sound financial choices and increase their household incomes.

Likewise, the Central Bank of Jordan and GIZ have been implementing a program targeting Syrian refugees in Jordan since 2015 to improve their access to remittances and other financial services through digital solutions. The program includes an information campaign on digital money transfer services and basic financial literacy training and has nearly attained its goal of reaching 20,000 refugees.

GOVERNMENT OF RWANDA DEVELOPS A UNIVERSAL DIGITAL PENSION SCHEME

In December 2018, the Government of Rwanda launched EjoHeza (which means brighter future), its long-term digital savings scheme, to provide Rwandans with a tailored and accessible digital retirement savings option.

The service allows users to open and manage their accounts through their mobile phones with a simple interface using their national ID, and provides incentives such as a matched government contribution and free life and funeral insurance up to a certain amount to encourage uptake and usage (Republic of Rwanda 2018; EjoHeza 2018).
3.2. GLOBAL CRISIS

Financial resilience is the ability to meet large expenses that have resulted from an unexpected financial shock (e.g. loss of income, death in a family, sickness or medical emergency, and loss or damage of business, livestock or crops) (AFI 2019). In the context of the COVID-19 pandemic, it is important to consider the three stages of resilience, pre-crisis, during a crisis and post-crisis. These include:

- **STAGE 1: Preventing or avoiding a shock (pre-crisis)**
- **STAGE 2: Withstanding or surviving a shock (during a crisis)**
- **STAGE 3: Recovering or rebuilding from a shock (post-crisis)**

Vulnerable groups such as youth, women, forcibly displaced persons, older persons and PWDs are disproportionately affected by crises such as the current health pandemic. These segments are over-represented in the informal sector and sectors negatively impacted by the health crisis, such as tourism and food services. The COVID-19 crisis has greatly affected the financial resilience and well-being of low-income households in developing countries; this is particularly significant for women who have been disproportionately impacted39.

**Table 8:** Policy responses to help vulnerable segments before, during and after a crisis

<table>
<thead>
<tr>
<th>PRE-CRISIS</th>
<th>DURING A CRISIS</th>
<th>POST-CRISIS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Identify the three stages of resilience through an awareness campaign</td>
<td>Raise awareness of any financial behaviors that people need to change to improve their financial resilience and well-being</td>
<td>Raise awareness of how to learn from the COVID-19 pandemic and plan a post-crisis future to rebuild livelihoods through government support, financial services or identifying new opportunities</td>
</tr>
<tr>
<td>Focus on short-term interventions that build skills in daily financial management on a reduced income, savings windfall or unexpected portion of income, how to avoid scams and how to manage existing and future debt</td>
<td>Use digital platforms to deliver financial education training and provide online resources</td>
<td>Identify how vulnerable segments are affected by the crisis in both the short and long-term</td>
</tr>
<tr>
<td>Focus on long-term interventions that build skills in creating an emergency savings fund, purchasing insurance and long-term planning, and investing</td>
<td>Build digital financial literacy to promote the use of digital financial services to receive humanitarian or government aid, make or receive payments with family members or friends and reduce transaction costs</td>
<td>Identify which financial behaviors need to be adopted, changed or reinforced so vulnerable segments are better prepared for a future shock or crisis</td>
</tr>
</tbody>
</table>

39 For example, many income sources have been reduced or savings depleted, particularly for those working in the informal sector while access to new or additional credit is limited. Many low-income households tend to react to a crisis, such as the current one, attempting to survive it (Stage 2) as opposed to preparing for it or preventing it altogether (Stage 1). During this stage, these households may adopt various coping strategies such as using savings, selling an asset, using informal instruments, cutting back on consumption or seeking support from networks.
BHUTAN PIVOTS TO VIRTUAL PLATFORMS FOR CAPACITY BUILDING

In 2018 and 2019, the Royal Monetary Authority (RMA) of Bhutan with funding support from Germany’s Savings Bank Foundation for International Cooperation (SBFIC) initiated and conducted a TOT workshop and YE Banking pilot replication with 21 schools across the country. In 2020, the RMA transitioned to a virtual TOT due to the current health pandemic.

The TOT provides an overview of the program, technical content and monitoring and reporting requirements together with tips for teachers such as how to make the training fun, interactive and inclusive by providing opportunities to children with lower levels of competencies and special needs.

The TOT also provides tips for parents and other caregivers to encourage them to open bank accounts for their children, teach them how to budget, show them the value of saving, encourage philanthropic ideas and to create learning.

4. CONCLUSION

This Guideline Note outlined key policy considerations to address barriers to financial education for vulnerable market segments, including women, youth, FDPs and additional target groups such as older persons and PWDs.

In summary, the following policy considerations should be considered for each vulnerable market segment:

> TARGET GROUPS: Identify and prioritize target groups taking a nuanced approach towards understanding their specific financial education needs and learning preferences.

> PROGRAMS AND TOOLS: Customize the program, build the capacity of trainers or teachers, leverage existing touchpoints, teachable moments and existing groups and networks for the target groups.

> STAKEHOLDERS: Identify key stakeholders that work with the target group, integrate the target group into key stakeholder groups and adopt a community-wide approach.

> IMPACT: Conduct monitoring and evaluation of these targeted financial education programs.

Building on the above policy considerations, specific vulnerable groups can be integrated in every stage of an existing or new NFES, namely: pre-formulation, formulation, implementation, monitoring and evaluation.

These considerations also need to be adaptable to the evolving global financial inclusion landscape such as the booming digitalization of financial products and services while being sensitive to potential shocks, such as the current pandemic. Both the current Guideline Note and complementary toolkit aim to share the experiences and best practices of AFI members to guide policymakers and regulators on the above considerations.

ANNEX B: INTEGRATING VULNERABLE GROUPS IN AN NFES

**PRE-FORMULATION PHASE**

1. Conceptualize the NFES
2. Conduct a Diagnostic and Analysis
3. Identify the Institutional Structure and Coordinating Mechanism

During the pre-formulation phase, financial policymakers and regulators should first define the key characteristics of the market segments, such as the age range of youth and groups that comprise the forcibly displaced. They should then ensure that youth, women and FDPs are a representative sample of a larger national survey to ensure the financial education responds to their financial needs, behaviors and learning preferences.

Another alternative is to develop a smaller survey for each vulnerable group within the larger demand-side national survey. Demand-side data should be complemented with supply-side data to gain a holistic understanding of the needs, gaps and opportunities. The results from the baseline analysis should be segmented by age, sex, and country of origin.

When identifying the institutional structure and coordinating mechanism for the NFES, it is important to include a representation of the key stakeholders from the macro, meso and micro levels that work directly with youth, women and FDPs such as a Ministry of Youth, Ministry of Gender or Ministry of Displacement and Migration. This can be done by designating working groups for each of these segments along with any other priority target groups.

All vulnerable target groups in the working groups for the NFES should be given a voice in shaping policies that will affect them as well as the chance to identify financial education leaders and ambassadors among these groups who can be leveraged in a later phase such as peer educators, particularly for youth.

**FORMULATION PHASE**

1. Identifying policy priorities
2. Developing an implementation plan
3. Developing a monitoring and evaluation framework

During the formulation phase, it is first important to align the needs of youth, women and FDPs as identified during the diagnostic in the pre-formulation phase with the policy priorities of the NFES such as the vision, mission, guiding principles and strategic objectives. It is also vital to understand how these areas intersect and if this acts as either an additional structural barrier or an enabler to progress. Financial policymakers and regulators should then identify the different sub-segments within each group (e.g. age, education, type of employment, geographic location, country of origin).

When developing an implementation plan, it is important to identify and prioritize different financial education content and delivery channels appropriate for the various populations of youth, women and the forcibly displaced persons (cf. Implementation Phase).

To align with global best practices, the financial education content should be tailored to the needs and interests of each group; be simple; motivate them to learn; be inclusive; integrate digital tools and provide opportunities for application. Further information on best practices for the different target groups is available in Annex A. A multi-delivery channel approach to reach these groups includes raising awareness, direct training, practice, and reinforcement.

Another key consideration when developing the implementation plan, is to identify different touchpoints or teachable moments for financial education to reach the different sub-segments of the target groups, a key policy consideration. An action plan, a key component of the implementation plan, can be created and tailored specifically for each of the various target groups.

Lastly, gender-sensitive, age-based and country of origin performance indicators must be included within the NFES monitoring and evaluation framework to ensure the targets for each vulnerable group are on track at both the national and programmatic levels.

When working with youth and other vulnerable market segments, an important best practice to consider when developing the NFES implementation plan is to identify key touchpoints or ‘teachable moments’ to introduce financial education, which can help determine the most appropriate delivery channels or platforms to reach youth.
IMPLEMENTATION PHASE

1. Preparing for the rollout
2. Rolling out the program
3. Conducting monitoring and evaluation

During the implementation phase, it is important that the stakeholders or working groups identified in the previous phase identify organizations in the non-profit and civil society sector that have existing programs and trained staff to work with the target groups. These organizations can then identify and obtain the buy-in of key influencers or gatekeepers for youth, women and FDPs ensuring their participation in the financial education activities.

Next, it is important to identify the most appropriate channels for youth, women and FDPs to raise awareness of financial education topics and key messages. For example, radio would be an effective medium to reach women in rural areas and FDPs in camps or settlements while social media would naturally be a more effective channel to reach youth. Examples of delivery tools and channels are available in Annex B.

Utilizing a cascade training model, it is important to first build the capacity of stakeholders who already work directly with youth, women, and FDPs and to then build the capacity of peer educators among these groups. Piloting the program with these groups is essential before scaling them up to identify any necessary changes to better respond to their needs.

When rolling out the program, it is important to develop partnerships with key stakeholders from the non-profit and civil society sectors that already serve these groups. Finally, it is important to identify the ways men can also act as enablers for all three groups and to develop activities which include their participation.

**Monitoring and Evaluation**

After the financial education program has been tested, revised, and rolled out with the specific target groups, it is important to conduct ongoing monitoring to measure the progress of the NFES and ensure the financial education program impacts vulnerable target groups.

When conducting monitoring and evaluation, it is important to collect and analyze fully disaggregated data according to the different subgroups established for each target group and that the outcomes at the national level are aligned with a Results or Log Framework and that the programmatic level is aligned with a Theory of Change.

The M&E targets should be aligned directly with the indicators identified in the baseline survey (e.g. financial knowledge, skills and attitudes). An evaluation framework is useful in evaluating the relevance, efficiency, scalability and sustainability of the NFES at a national level and also at a programmatic level at a mid or endpoint.
## ANNEX C: BEST PRACTICES

<table>
<thead>
<tr>
<th>THEME</th>
<th>BEST PRACTICES FOR WOMEN</th>
<th>BEST PRACTICES FOR YOUTH</th>
<th>BEST PRACTICES FOR FDPs</th>
<th>OTHER</th>
</tr>
</thead>
<tbody>
<tr>
<td>CUSTOMIZATION</td>
<td>Identify and tailor to all sub-segments of women (e.g. youth, older persons, single mothers, women living with a disability, migrant women, rural women and entrepreneurs)</td>
<td>Identify and tailor to all sub-segments of youth (e.g. enrollment status, geographic location, gender, type of employment)</td>
<td>Identify and tailor to all sub-segments of FDPs (gender; age; location: camp, urban or rural area; place or country of origin; length of displacement; type of assistance received)</td>
<td>Identify and tailor to all segments of older persons (e.g. age, gender, marital status, geographic location) and PWDs (e.g. type of disability)</td>
</tr>
<tr>
<td></td>
<td>Select delivery models that reflect the local context and respond to the financial needs and availability of women (e.g. considers work schedules, domestic duties, childcare responsibilities, etc.) and leverages touchpoints (e.g. kiosks in grocery stores, shopping malls, government cash transfer programs)</td>
<td>Provide content that is relevant to the life stage of youth (e.g. early adolescence, late adolescence, young adulthood) moving from basic to more complex concepts (e.g. money management, planning ahead, use of financial services, consumer protection)</td>
<td>Select delivery models that reflect the host country’s context and respond to the financial needs and availability of FDPs and leverage touchpoints (e.g. border check points, refugee camps, pre-departure orientation, integration and training programs, migration centers, employment centers, health and cash assistance, traditional and digital payment providers)</td>
<td>Provide an accessible venue for training (e.g. ramps, elevators, large screens)</td>
</tr>
<tr>
<td></td>
<td>Provide a safe, convenient, and accessible environment that respects the privacy of women and the care responsibilities they may also have</td>
<td>Tailor learning methods to age and life stages (e.g. younger youth may prefer games and activities while older youth may prefer discussions and stories)</td>
<td>Target FDPs where they live, work and frequent</td>
<td>Tailor delivery models to disabilities (e.g. SMS, IVR, audio-visual materials, local radio, community information sessions)</td>
</tr>
<tr>
<td></td>
<td>Target women and young girls where they live, work and frequent</td>
<td></td>
<td></td>
<td>Leverage touchpoints for older persons (e.g. convenience stores or markets, nursing homes, pharmacies, public transport providers, churches, community centers or restaurants) and PWDs (e.g. special needs schools, rehabilitation centers, churches, homes for disabled and holiday camps)</td>
</tr>
<tr>
<td></td>
<td>Develop content with a gender sensitive lens and ensure the trainer is able to deliver it in a gender sensitive manner</td>
<td>Select delivery models that reflect the local context and respond to the financial needs of youth</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Provide content tailored to displacement phases (e.g. arrival, initial displacement, protracted displacement, permanence) and align terminology and technology of the new financial landscape in the host country with that of the home country</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Identify positive use cases of successful older persons or PWDs to promote inclusivity through a national prize</td>
<td>Identify positive use cases or examples relevant to women to overcome issues of trust through a national prize</td>
</tr>
<tr>
<td>THEME</td>
<td>BEST PRACTICES FOR WOMEN</td>
<td>BEST PRACTICES FOR YOUTH</td>

<tr>
<td>--------------</td>
<td>------------------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------</td>
</tr>
<tr>
<td>SIMPLIFICATION</td>
<td>Integrate and reinforce simple key messages across a variety of channels</td>
<td>Adopt a critical minimum approach (e.g. simple key messages that are standardized across channels, short sessions, minimum materials and simple facilitation techniques) - making it easier for youth to understand and for teachers or facilitators not familiar with the technical content</td>
<td>Integrate and reinforce simple key messages across a variety of channels</td>
<td>Use simple language and terms displayed in an audio and visual manner</td>
</tr>
<tr>
<td></td>
<td>Breakdown more difficult concepts and tasks into smaller ‘bite-size’ steps and concepts (scaffolding)</td>
<td>Simplify messages, concepts and materials</td>
<td>Breakdown more difficult concepts and tasks into smaller ‘bite-size’ steps and concepts (scaffolding)</td>
<td></td>
</tr>
<tr>
<td>MOTIVATION</td>
<td>Make it relevant to financial needs and life stages</td>
<td>Make it fun and social (e.g. games, competitions, storytelling and small groups)</td>
<td>Make it relevant to the displacement stage and financial needs in the host country</td>
<td>Use trainers who are older persons or have disabilities to demonstrate real-life success stories</td>
</tr>
<tr>
<td></td>
<td>Offer incentives, awards and certificates</td>
<td>Offer incentives (e.g. airtime credit, savings accounts, passbooks, piggy banks), awards, certificates, diplomas and stipends</td>
<td>Make it relevant to the type of disability they have that affects their access</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Use female trainers, segregate trainings by gender and apply adult principles of learning to provide a supportive and safe environment and promote active participation</td>
<td>Provide opportunities that create a sense of belonging and making connections with peers, families and communities</td>
<td>Offer incentives, awards and certificates that expand access to services in the host country (e.g. airtime credit, bank account)</td>
<td>Provide certificates and awards for completion</td>
</tr>
<tr>
<td></td>
<td>Leverage existing women’s groups, networks or associations (e.g. savings groups, savings and credit groups, church groups, association groups)</td>
<td>Use a peer educator model, mentors and youth principles of learning (e.g. experiential, relevant, up-to-date) to provide a supportive and safe environment and promote active participation</td>
<td>Use peer educators and mentors from the host country to build networks in the host country</td>
<td></td>
</tr>
<tr>
<td>FLEXIBILITY</td>
<td>Offer childcare, flexible hours of participation and alternative ways to access content (e.g. online, recorded, mobile app, social media groups and forums) to increase participation</td>
<td>Offer activities that are based on the availability of youth (e.g. when in school, when working; seasonality of the school calendar such as school vacations and exams)</td>
<td>Offer training based on the work schedules, family commitments and other commitments of FDPs along with alternative ways to access content (e.g. SMS, mobile phone app)</td>
<td>Provide a flexible program schedule and timeline as it may take longer to complete the program requirements along with accessible ways to access the content</td>
</tr>
<tr>
<td>COMMUNITY-WIDE APPROACH</td>
<td>Integrate men such as spouses, other family members, community leaders or other gatekeepers</td>
<td>Integrate youth influencers: parents, caregivers, teachers, mentors and peers</td>
<td>Integrate family members from the host community and community leaders from refugee camps or settlements</td>
<td>Integrate family members and caretakers</td>
</tr>

The Make Money Work for a Better Future Financial Coaching Program: Once trained, the coaches then deliver the five financial education activities to coachees (learners) helping them navigate their current financial situation, goals for the future, financial products and service providers, in addition to building their confidence to take control of their money through tailored tools and take-home challenges. A key feature of the program is to involve the coachee’s family in their shared ‘journey’ towards a positive financial future to ensure that positive money behaviors are sustained.

CBSI conducted two pilots in 2018 and 2019 to train coaches to deliver a seven-week program with women’s savings groups. Each of the seven sessions is roughly one hour in length and integrates drama clips from a financial education radio program, provides a key message and makes linkages to client protection principles and financial capability indicators. The program integrates principles and practices for coaches that align with global best practices and include:

- Respecting and recognizing participants (coachees) as decision-makers of their own learning and actions
- Ensuring safety in the environment and in the process of coaching
- Practicing dialogue
- Supporting coaches to find the best solutions to challenges and problems
- Engaging coaches throughout the sessions
- Recognizing that each coachee and each group is unique
- Managing time well

ANNEX H - TANZANIA ADOPTS A MULTI-CHANNEL DELIVERY APPROACH FOR FDPs

The Bank of Tanzania introduced merchant payments as part of an initiative to enhance the digital financial service eco-systems in refugee camps. In 2017, UNCDF Tanzania launched a program in partnership with UNHCR and international and local NGOs to improve access to finance in the Nyarugusu refugee camp through savings groups, digital and financial literacy interventions, and advocacy. Savings groups offer an ideal platform for the delivery of financial capability tools which complement the practical experience savings groups provide through active participation. Women and youth are the two key target groups of this program, which was expanded to other refugee camps and the host community in the Kigoma region - and is now called the Kigoma Joint Programme.

Through this program, UNCDF developed a financial literacy toolkit with a three-pronged delivery approach using tablets, SMS messaging and in-person training through savings groups (see Table 3) that was largely informed by its baseline assessment. Jijenge, the tablet-based app, builds users’ digital and financial capabilities through video stories, drag-and-drop quizzes, games, and short cases. For SMS messaging, users dial a code using any type of phone and receive a reply that allows them to enter the learning platform where they can read content and answer questions through SMS.

In 2019, several videos were added to the toolkit that highlight aspects of rural and refugee life and were distributed as part of longer Kiswahili-language films. ‘Savings is Love,’ the ensuing campaign, is comprised of seven short videos. In 2020, a comic book and podcast series were developed and branded as ‘Lenga’ which means ‘goal’ in Swahili. The series tells the story of the Malengo family who work together to track and control their spending, save money and plan budgets for their future. UNCDF conducted training-of-trainers workshops for key stakeholders such as partner NGOs and other organizations working in the refugee camps to build capacity in using the different tools.
